

Back to front

Backend technologies for the frontend developer

@geeky_android@androiddev.social

Who am I?

Savvas Dalkitsis

(he/him)

Principal Software Engineer
@ASOS

ASOS

Why am I here?

A circular arrangement of Android development terms in various colors, including:

- gradle
- adb
- Firebase
- Android
- Material
- Coroutines
- SQLite
- UI
- MVVM
- Retrofit
- MVP
- Bauer
- Hilt
- Room
- RxJava
- Jetpack
- Compose
- Google Play
- Play Services
- Studio

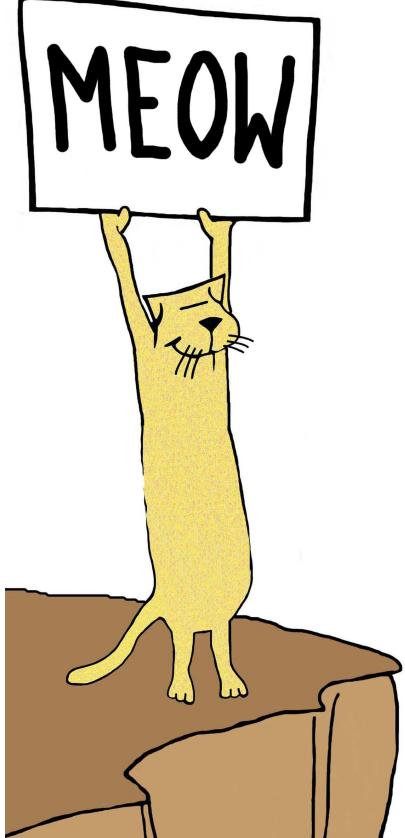

@geeky_android@androiddev.social

A circular word cloud diagram centered on the term "edge-workers". The words are arranged in concentric circles around the center, with the size of each word indicating its frequency or importance. The words include:

- cookies
- jwt
- Round-robin
- etag
- sail
- ingress-controller
- non-blocking-io
- saas
- cdn
- oauth
- dns
- functions
- optimistic-locking
- containers
- message-queues
- clusters
- infidelity
- chaos-monkey
- server-side-rendering

So what?

Language barriers are real in tech too.

Progressing your career means being able to have meaningful discussions with people outside your domain and comfort zone.

A basic understanding of their language is paramount.

Let's start

@geeky_android@androiddev.social

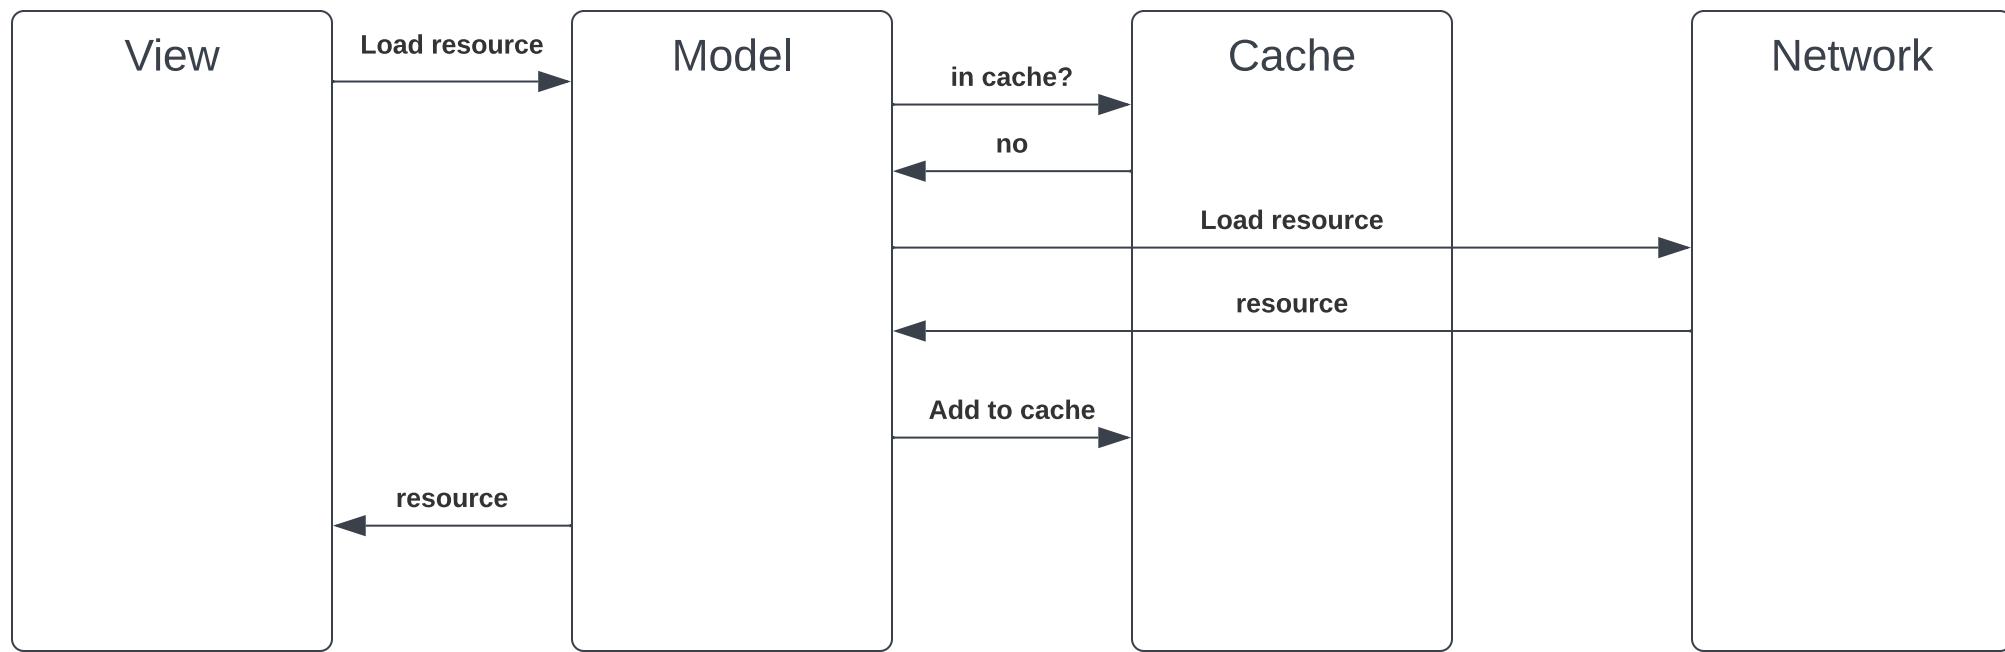

Caching

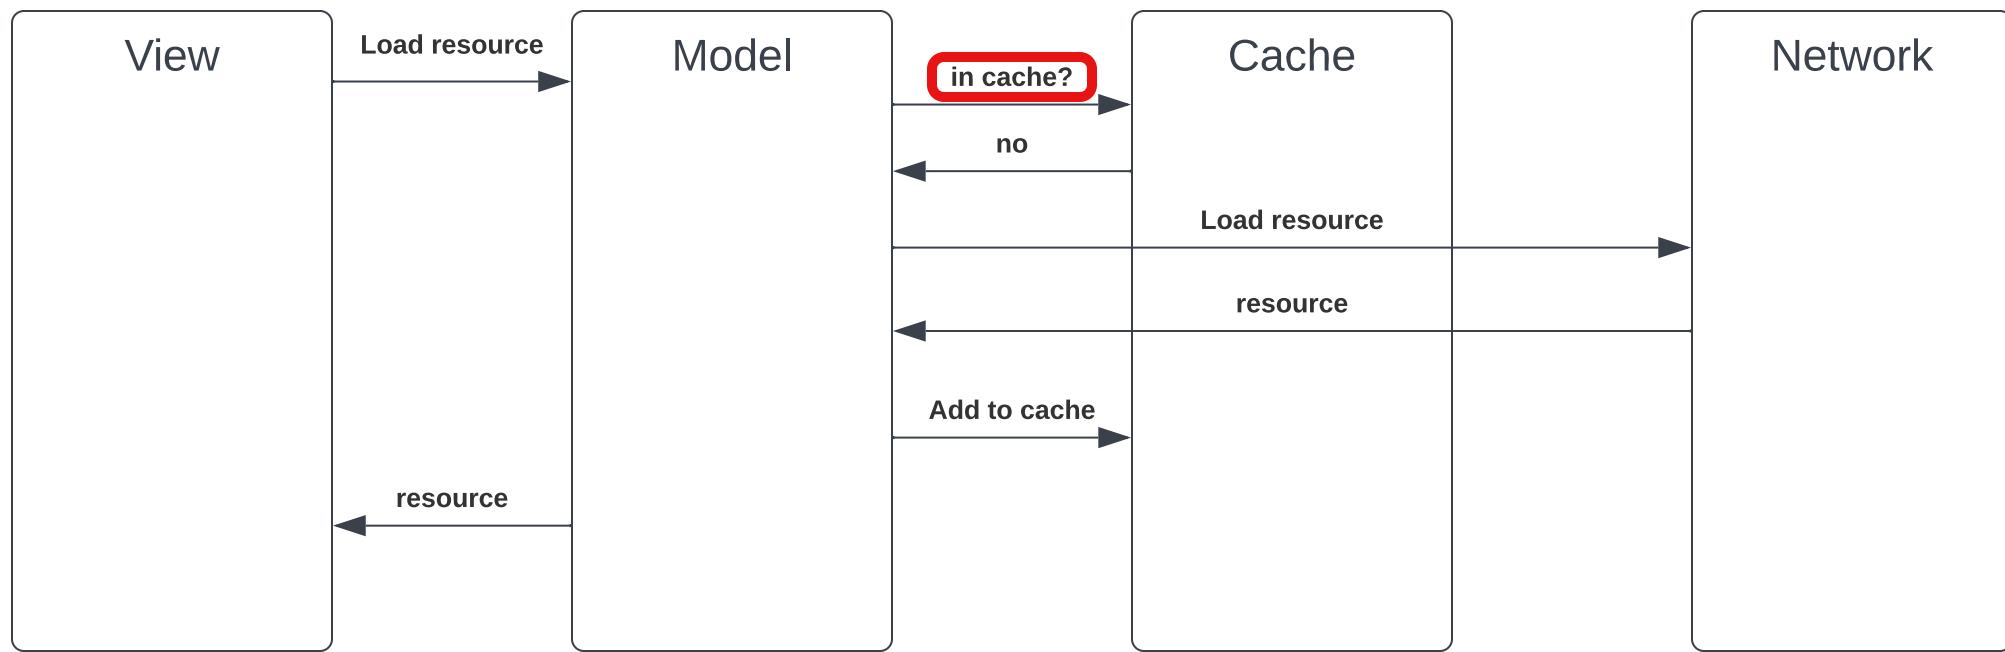

There are only two hard things in Computer Science: cache invalidation and naming things.

| Phil Karlton

Caching

Expiry headers

Caching

Server side controlled expiry

Caching

Server side controlled expiry

Expires header

Example `Expires: Wed, 21 Oct 2015 07:28:00 GMT`

@geeky_android@androiddev.social

Caching

Server side controlled expiry

Cache-Control header

Example Cache-Control: max-age=604800

The following table lists the standard Cache-Control directives:

Request	Response
max-age	max-age
max-stale	-
min-fresh	-
-	s-maxage
no-cache	no-cache
no-store	no-store
no-transform	no-transform
only-if-cached	-

Request	Response
-	must-revalidate
-	proxy-revalidate
-	must-understand
-	private
-	public
-	immutable
-	stale-while-revalidate
stale-if-error	stale-if-error

<https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/Cache-Control>

 @geeky_android@androiddev.social

Caching

ETags

@geeky_android@androiddev.social

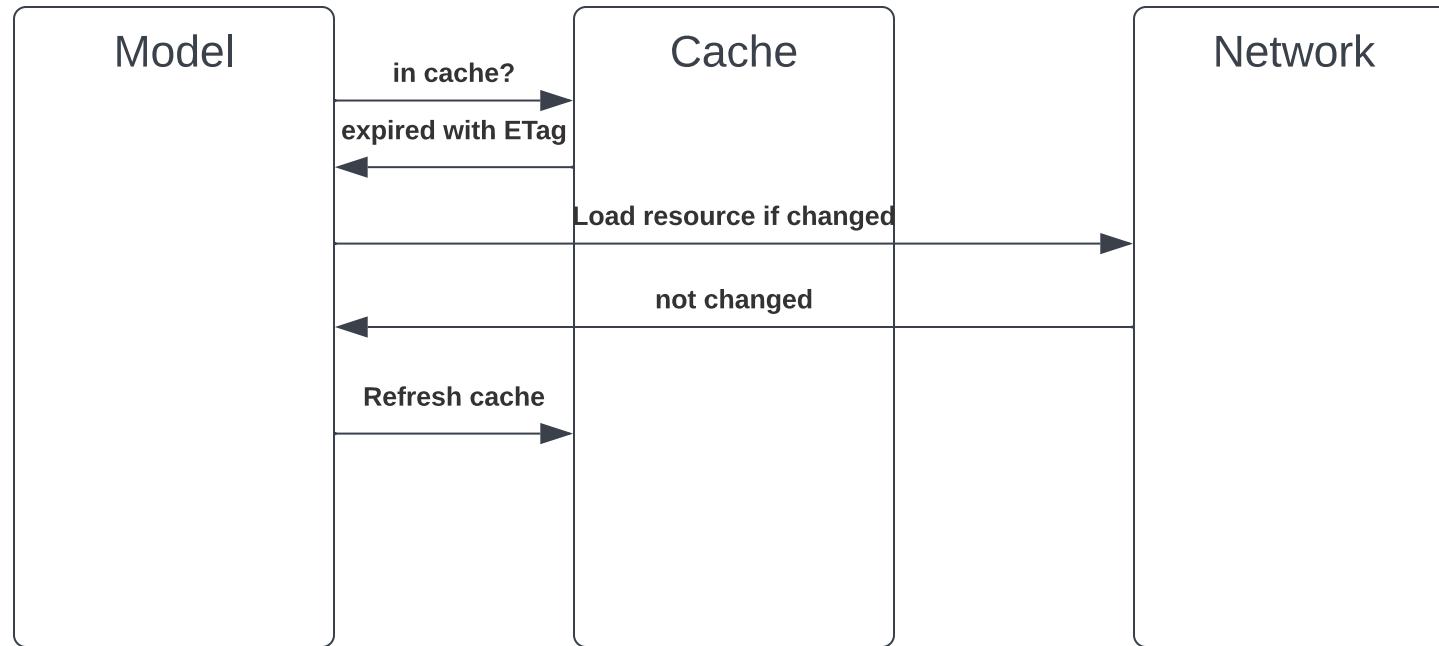

What is an ETag?

The ETag (or entity tag) HTTP response header is an identifier for a specific version of a resource. It lets caches be more efficient and save bandwidth, as a web server does not need to resend a full response if the content was not changed.

| <https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/ETag>

ETag = Unique Resource ID

| Example ETag: "33a64df551425fcc55e4d42a148795d9f25f89d4"

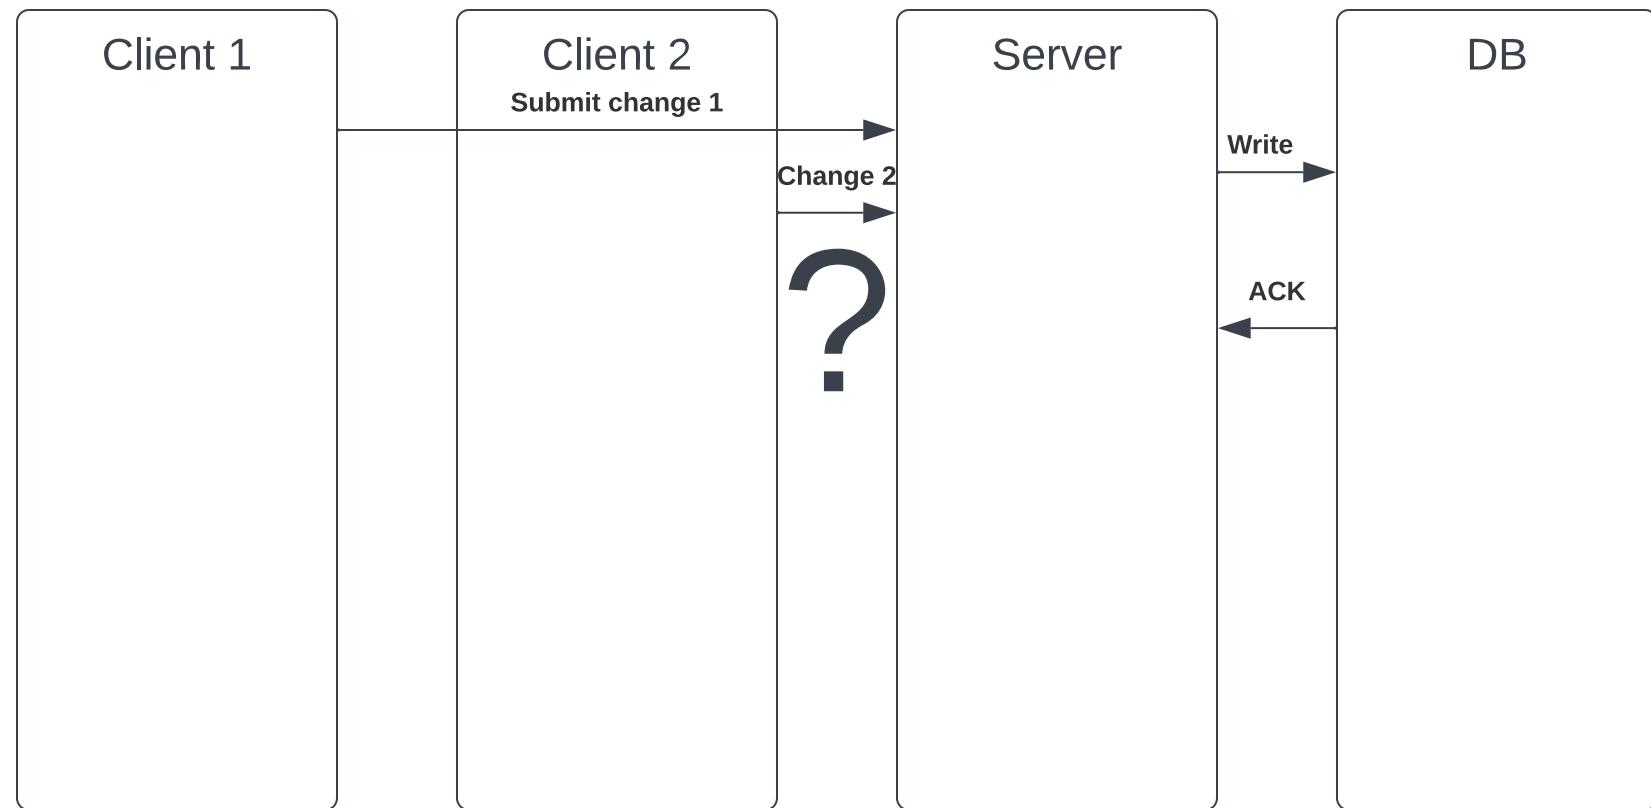

| Example If-None-Match: "33a64df551425fcc55e4d42a148795d9f25f89d4"

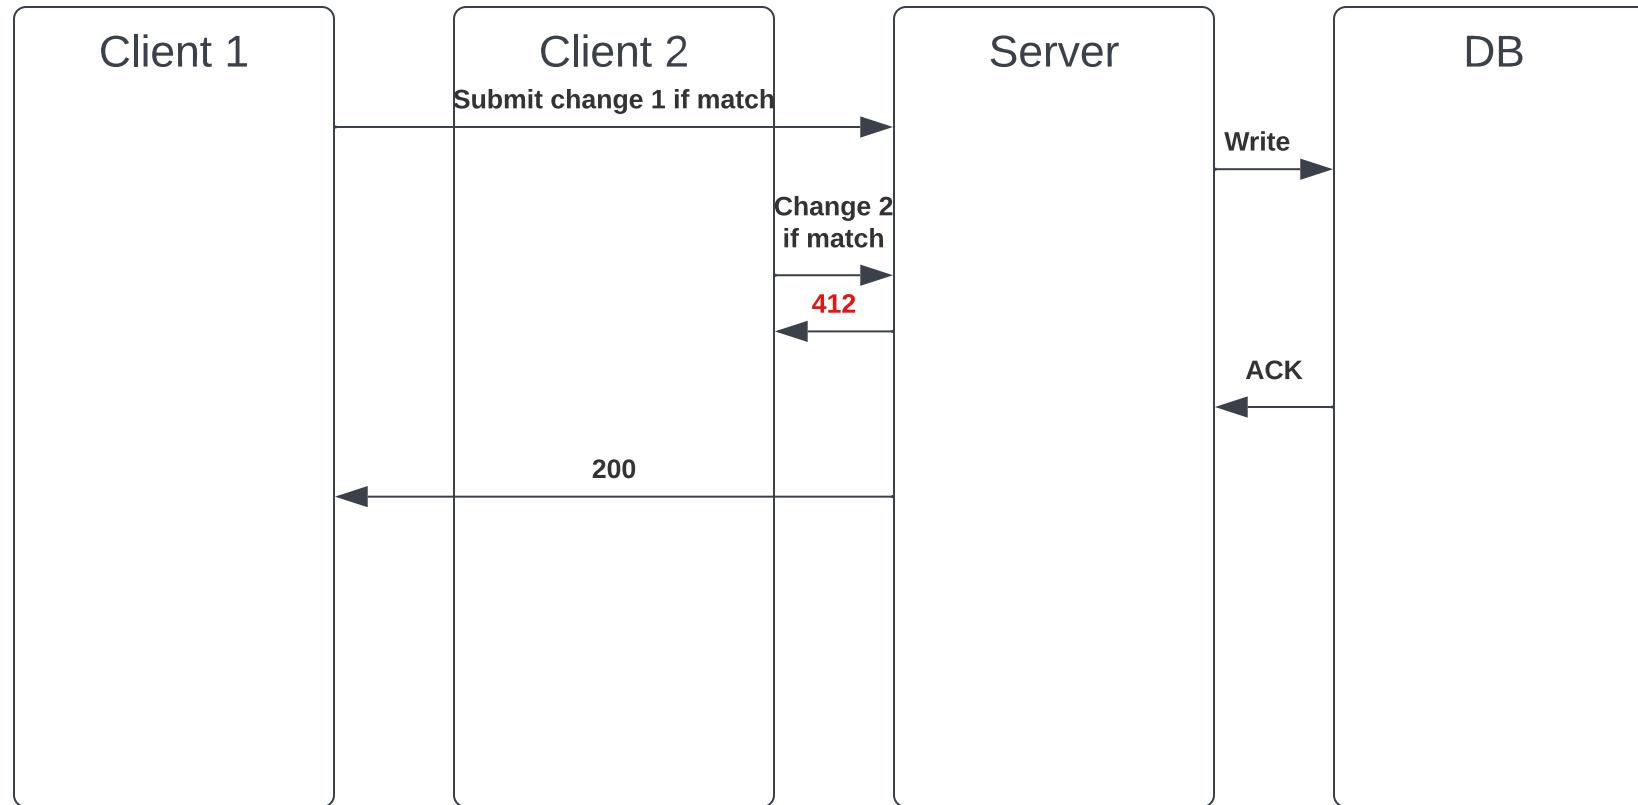

ETag

Mid air conflicts

@geeky_android@androiddev.social

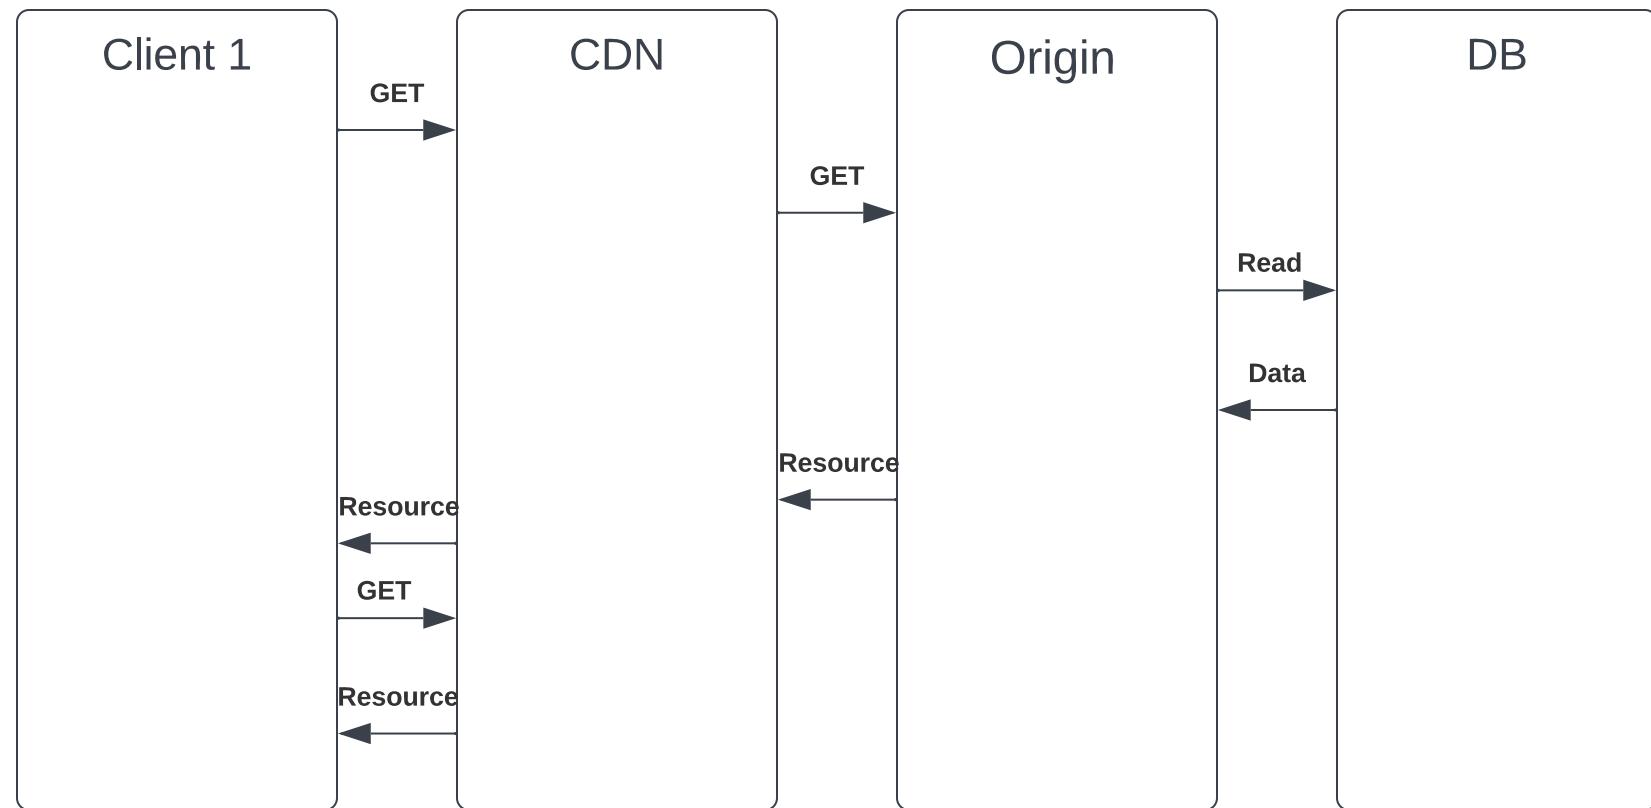

Example: If-Match: "33a64df551425fcc55e4d42a148795d9f25f89d4"

Web Application/API Design

@geeky_android@androiddev.social

Web Application/API Design

REST

| Give it a REST

**REST is a set of architectural constraints, not a protocol or a standard.
API developers can implement REST in a variety of ways.**

| <https://www.redhat.com/en/topics/api/what-is-a-rest-api>

Web Application/API Design

HTTP Verbs

| Oh CRUD

Does this look familiar?

`https://my.awesome/api/people/1/addAddress`

`https://my.awesome/api/people/1/getAddress`

`https://my.awesome/api/people/1/changeAddress`

`https://my.awesome/api/people/1/deleteAddress`

@geeky_android@androiddev.social

`https://my.awesome/api/people/1/ add Address`

`https://my.awesome/api/people/1/ get Address`

`https://my.awesome/api/people/1/ change Address`

`https://my.awesome/api/people/1/ delete Address`

@geeky_android@androiddev.social

HTTP **verbs**, REST resources **nouns**

POST `https://my.awesome/api/people/1/ address`

GET `https://my.awesome/api/people/1/ address`

PUT `https://my.awesome/api/people/1/ address`

DELETE `https://my.awesome/api/people/1/ address`

Web Application/API Design

Query parameters

| <http://i.already/know?about=those>

TL;DR;

If you ever see this in your api:

| <https://something.or.other/login?username=rick&password=pickle>

@geeky_android@androiddev.social

Web Application/API Design

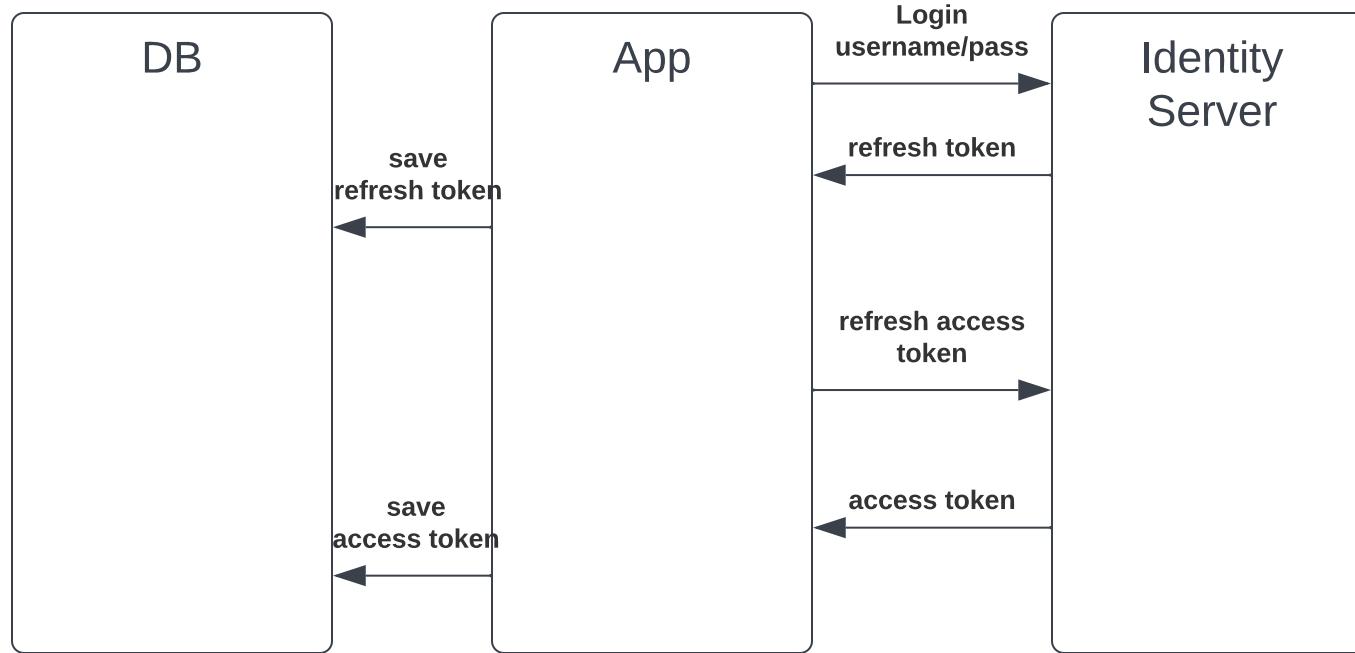

OAuth

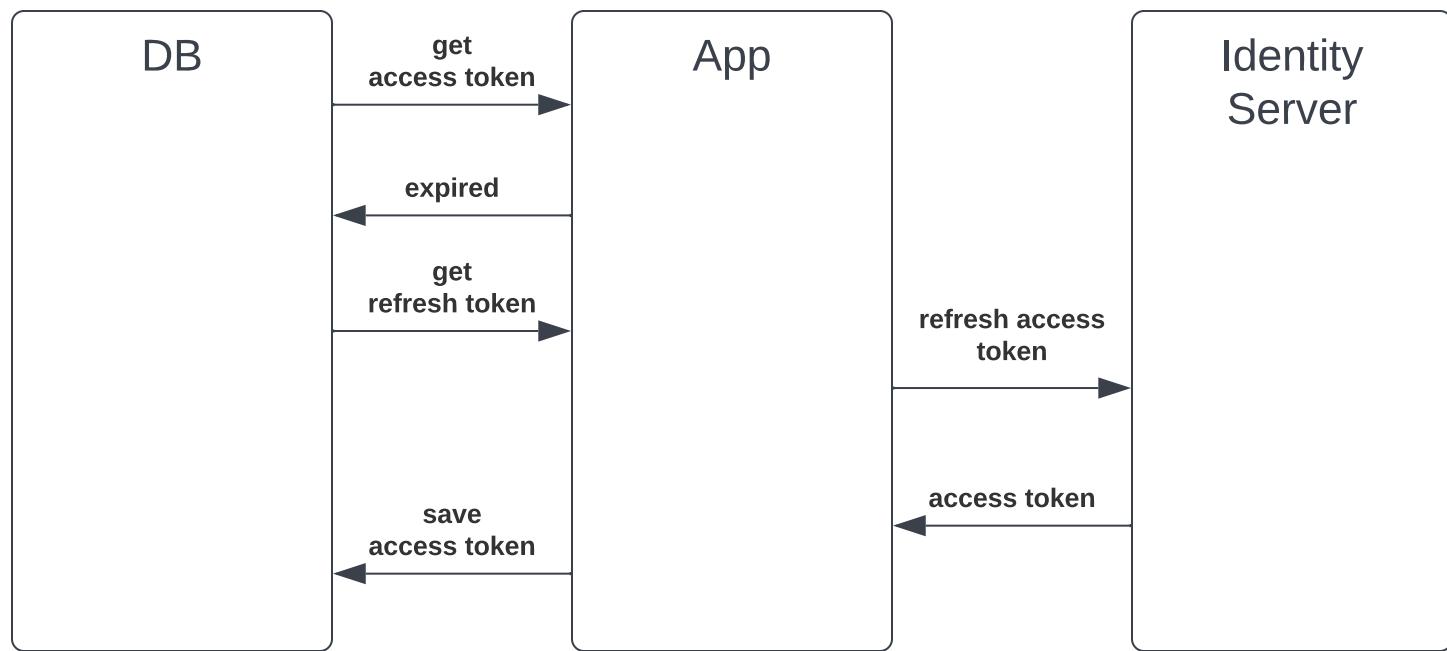

| oh oh ffff...

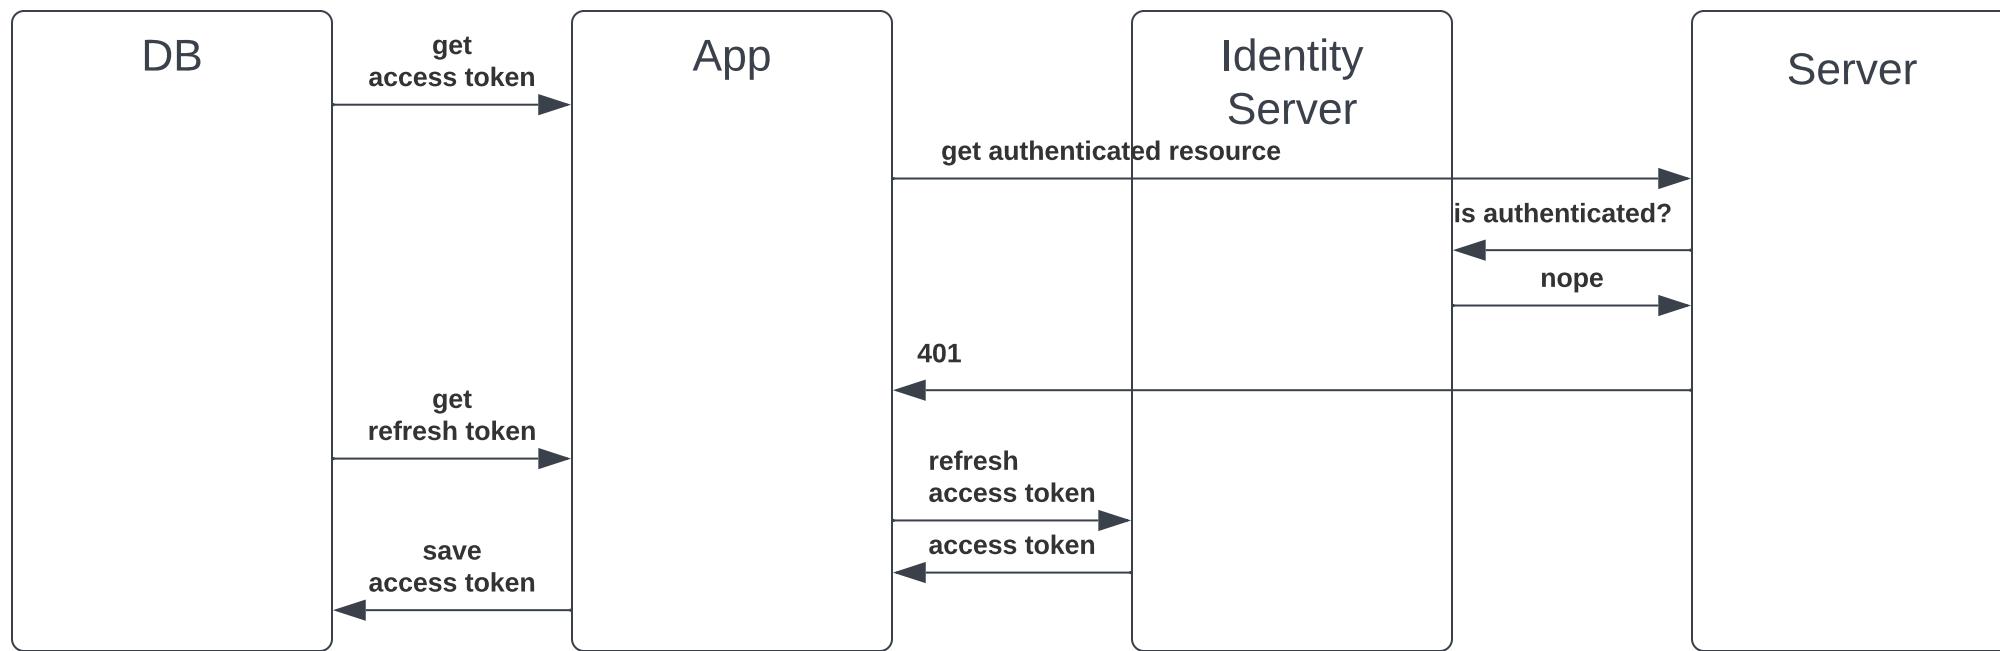

Why OAuth?

Remember this?

`https://something.or.other/login?username=rick&password=pickle`

Web Application/API Design

Idempotency

@geeky_android@androiddev.social

 @geeky_android@androiddev.social

ETags 2 - Return of the UUID?

If we follow the REST principles in designing our APIs, we will have automatically idempotent REST APIs for GET, PUT, DELETE, HEAD, OPTIONS, and TRACE methods. Only POST APIs will not be idempotent.

POST is NOT idempotent.

GET , PUT , DELETE , HEAD , OPTIONS and TRACE are idempotent.

<https://restfulapi.net/idempotent-rest-apis/>

Service topology

@geeky_android@androiddev.social

Containers!

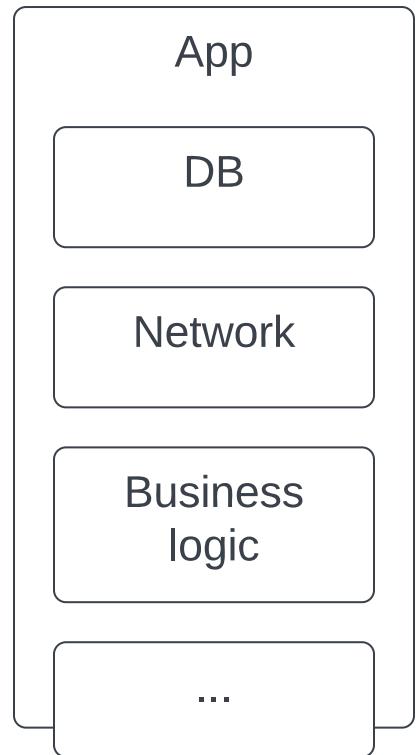

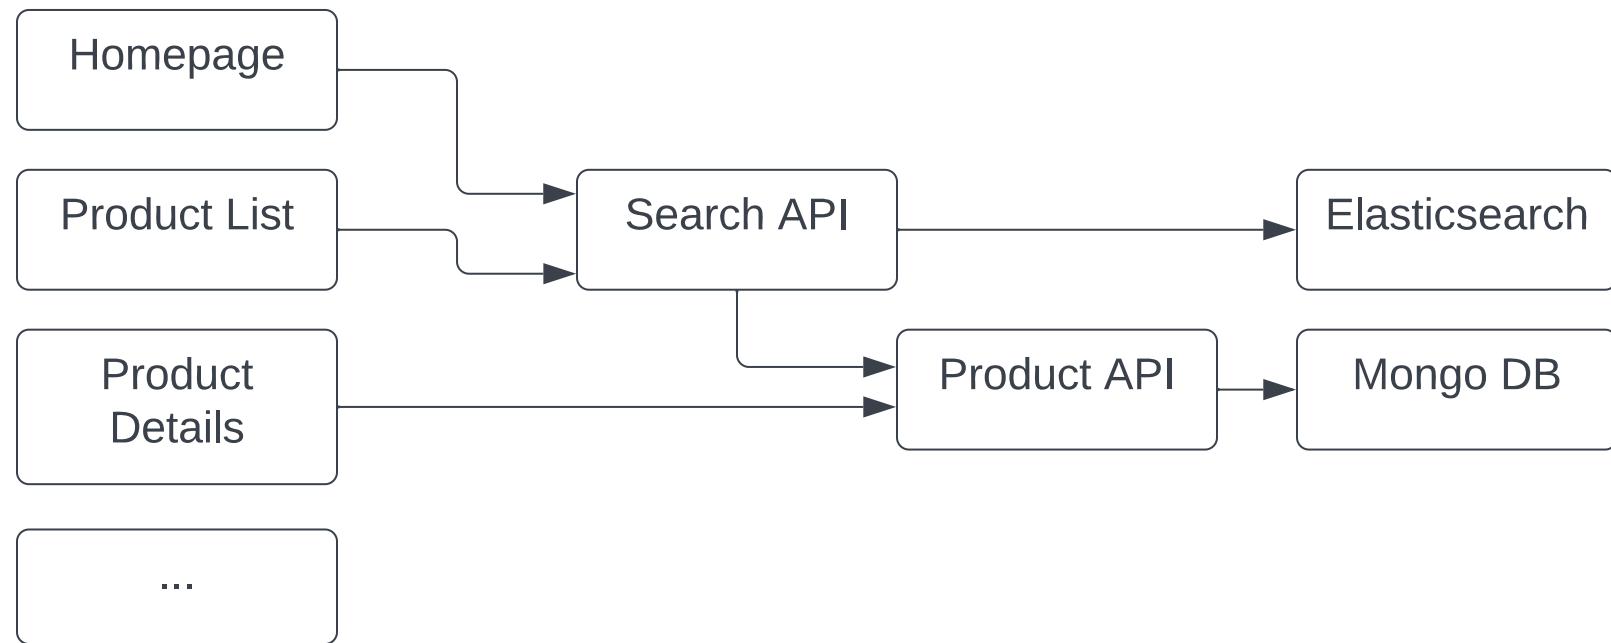

containerd

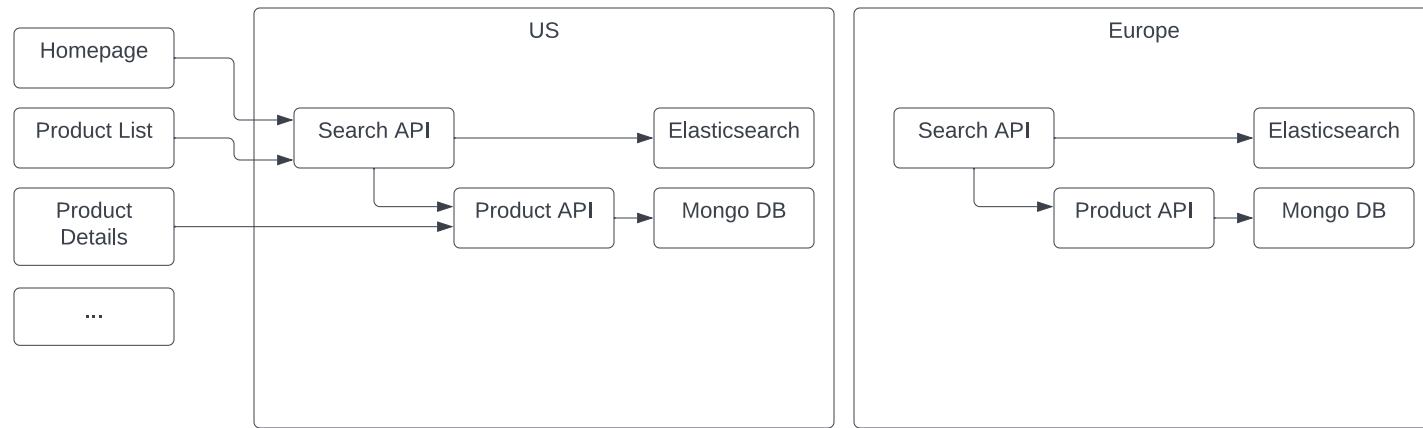

The Kubernetes logo, which is a blue hexagon containing a white steering wheel icon, followed by the word "kubernetes" in a large, bold, black sans-serif font.
